FlowChat — User Guide for Sales & Support

Who this is for: Sales reps, support agents, and team leads using live chat and CRM day to day.

What FlowChat does: One place to **chat with website visitors**, **manage contacts (CRM)**, and **run simple email follow-ups** — with leads from **LeadSnapper** flowing in automatically.

Sign in:

<https://www.digitalbrandcast.com/FlowChat/sign-in>

What you will use most

Area	Where in the app	You use it to...
Inbox	Dashboard (home)	Reply to live chats from your website
Contacts	Dashboard → Contacts	See leads from LeadSnapper and chat visitors
Settings	Gear icon → Settings	Widget, labels, canned replies (admins set up)
Marketing	Dashboard → Marketing	Email campaigns (if your role includes this)

Getting started

Sign in

1. Open the sign-in link above.
2. Enter your **email** and **password** (your admin invites you).
3. You land on the **Dashboard** — your conversation inbox.

Set your availability

Bottom of the left sidebar:

Status	Meaning
Online	You receive new chats and assignments
Busy	You are working but may get fewer auto-assignments
Offline	You do not receive new chats

Tip: Stay **Online** during business hours so website visitors get a fast reply.

Live chat inbox (Dashboard)

Conversation lists

Left sidebar under **Conversations**:

- **All conversations** — everything in the workspace
- **Mine** — assigned to you
- **Unassigned** — needs someone to pick up (red badge = waiting)

You can also filter by **Inbox** (e.g. "Website widget") or **Team**.

Replying to a visitor

1. Click a conversation in the list.
2. Type your message at the bottom and press **Send**.
3. Use **/** to insert a **canned response** (shortcuts your admin created).

Organising conversations

On each conversation you can:

- **Assign** to yourself or a teammate
- Add **labels** (e.g. Sales, Hot, Follow-up)
- Set **priority** (e.g. Urgent for hot inbound leads)
- Change **status**: Open → Pending → Resolved
- **Snooze** — hide until a reminder time (good for "call back Tuesday")

Visitor details

The right panel shows:

- Name, email, company (if they filled the pre-chat form)
- **Country / city** (when available)
- Link to **Contact** record in CRM

When you resolve a chat, the visitor stays in **Contacts** for future outreach.

Contacts (CRM)

Dashboard → Contacts

This is where **LeadSnapper leads** land after sync, plus contacts from chats and imports.

Finding someone

- **Search** by name, email, phone, or company
- **Filter** by labels or custom fields (e.g. Hot priority, UK market)

Contact profile

Open a contact to see:

- Phone numbers (business and owner mobile from LeadSnapper)
- Email and website
- LinkedIn and social links
- **Lead score** and **priority** (Hot / Warm)
- **Notes** — add your call notes here
- **Conversation history** and **email history** (if marketing is enabled)

Common actions

Action	How
Add a note	Contact profile → Notes → Save
Add a label	Contact profile or list bulk actions
Merge duplicates	Contact profile → Merge (admin)
Export list	Contacts → Export (if your admin enabled it)

LeadSnapper connection (CRM sync)

LeadSnapper is the Chrome tool your team uses on Google. **Qualified leads sync into FlowChat Contacts** — you do not type them in by hand.

How it works (simple)

Google / Maps → LeadSnapper → FlowChat Contacts → You call / email / chat

1. Rep finds businesses in **LeadSnapper** and scores them Hot or Warm.
2. Rep clicks **Sync qualified (Hot + Warm)** on the Export tab.
3. Contacts appear in **FlowChat → Contacts** with enrichment (phones, LinkedIn, etc.).
4. You work the lead from the contact profile.

What sales sees after sync

New contacts typically include:

- Business name and website
- Email and phone
- Owner name and mobile (when enrichment found them)
- LinkedIn (company and decision-maker)
- Lead **score** and **priority**
- Market (UK / US) and enrichment source

Duplicates are merged when the same business is synced again (same email or website).

If leads are missing

Check with your admin that:

1. **Settings → CRM → LeadSnapper sync** is ON
2. Minimum priority is **Hot + Warm** (not "Hot only" if the lead was Warm)
3. LeadSnapper **Settings** has the correct API URL and key
4. The rep actually clicked **Sync** on the Export tab

Settings overview

Open **Settings** from the sidebar. Most items are **admin-only**; sales uses the results daily.

General (admin)

Page	Purpose
Account	Company name, timezone (e.g. UK), logo
Agents	Invite teammates, set roles
Teams	Groups like "UK Sales" for routing
Security	Two-factor login for admins

Channels

Page	Purpose
Inboxes	Website chat widget — colours, greeting, embed code for your site

Sales tip: If the widget is not on the website yet, ask admin for the embed code under **Settings → Inboxes**.

Automation (admin + daily use)

Page	Purpose
Labels	Tags for conversations and contacts (Hot Lead, Mutex, UK, etc.)
Canned responses	Type / in chat to insert saved replies
Auto messages	Welcome message when someone opens chat (online / offline)

Integrations (admin)

Page	Purpose
Integrations	API keys — including the key for LeadSnapper
Connected services	Your company's email provider and optional AI for the widget

CRM (admin)

Page	Purpose
CRM settings	Import/export rules, LeadSnapper integration , custom contact fields
Email marketing	Sender name, address, compliance footer

LeadSnapper setup (for admins — share with IT once)

Do this **once** before sales syncs leads.

1. Create API key

- Settings → Integrations**
- Create API key**
 - Name: LeadSnapper
 - Permission: contacts write
- Copy the key** (`fc_live_...`) — it is shown only once.
- Give the key to reps for LeadSnapper **Settings → Flow CRM sync**.

2. Enable CRM sync

- Settings → CRM**
- Turn on **Enable LeadSnapper → CRM sync**
- Minimum priority:** Hot + Warm (recommended)
- Click **Save & provision contact fields**

This creates the extra fields on contacts (lead score, social links, enrichment data, etc.).

3. Configure LeadSnapper extension

In LeadSnapper **Settings**:

Field	Value
Flow CRM sync	ON
API base URL	<code>https://www.digitalbrandcast.com/FlowChat/api</code>
API key	The <code>fc_live_...</code> key from step 1

Reps sync from **LeadSnapper → Export → Sync qualified (Hot + Warm)**.

4. Verify

- Sync one test lead from LeadSnapper.
- Open **Dashboard → Contacts** — the business should appear within a few seconds.
- Open the contact — check phone, priority, and LinkedIn fields.

Website chat widget (what visitors see)

Visitors on your website see a **chat bubble**. When they click it:

- They may see a short form (name / email).
- Auto messages** greet them (different text if your team is online vs offline).
- Messages appear in your **Dashboard** inbox in real time.

Your job: Reply quickly when **Unassigned** has a red badge — that is a new visitor waiting.

Optional: If **AI replies** are turned on by admin (Connected services), the widget may answer simple questions before you join. You can still take over the conversation anytime.

Marketing (if you send email)

Dashboard → Marketing

Section	Use
Segments	Groups of contacts (e.g. all Hot leads)
Templates	Email designs with {{first_name}} personalization
Campaigns	Send one email blast to a segment
Workflows	Automated follow-ups (e.g. welcome email after new contact)

Compliance: contacts who **unsubscribe** are blocked from future sends automatically.

Analytics

Dashboard → Analytics

High-level stats: conversation volume, response times, and trends. Useful for weekly team reviews — not needed for every reply.

Daily checklist for sales reps

Morning

- ☐ Set status to **Online**
- ☐ Check **Unassigned** conversations
- ☐ Review **Contacts** for new LeadSnapper syncs overnight

During the day

- ☐ Reply to chats within your team's target time
- ☐ Add **notes** and **labels** after calls
- ☐ Resolve chats when done; snooze follow-ups with a date

After prospecting (LeadSnapper)

- ☐ **Sync qualified (Hot + Warm)** to FlowChat
- ☐ Open new contacts in FlowChat and schedule outreach

End of day

- ☐ Set status to **Offline** if you are done
- ☐ Leave notes on open contacts for handover

Roles: who does what

Task	Sales rep	Admin / manager
Reply to chats	✓	✓
Work contacts & notes	✓	✓
Sync LeadSnapper	✓	✓
Create API key & CRM sync		✓
Install widget on website		✓
Invite agents & teams		✓
Email campaigns & workflows	Optional	✓
Canned responses & labels	Use	Create

Common questions

Where did my LeadSnapper lead go?

→ **Contacts**. Search the business name. If missing, confirm sync ran and priority was Hot or Warm.

Can I edit a contact synced from LeadSnapper?

→ Yes. Your edits in FlowChat stay; syncing again may update fields from LeadSnapper.

Someone chatted on the website — where is the contact?

→ Open the conversation → link to contact, or find them under **Contacts** by email.

I do not see Marketing

→ Your role may be chat-only; ask admin.

Widget not showing on site

→ Admin must add embed code and allow your domain in **Settings → Inboxes**.

Related guide

For step-by-step use of the Chrome extension (Find → Results → Pipeline → Export), see **LeadSnapper User Guide** (`LEADSNAPPER_USER_GUIDE.md`).

This guide focuses on everyday use. Technical deployment and DNS are handled by your admin team.
