LeadSnapper — User Guide for Sales

Who this is for: Sales reps, business development, and anyone finding new B2B leads on Google.

What LeadSnapper does: It is a Chrome extension that helps you find local businesses on Google, score them as Hot / Warm / Cold, enrich contact details (phone, email, LinkedIn, owner mobile), and send qualified leads into **FlowChat CRM**.

Before you start

You need:

1. **Google Chrome** on your computer
2. **LeadSnapper extension** installed (your admin will give you the folder or Chrome Web Store link)
3. **FlowChat account** — your admin sets up the connection once; you use the **Export** tab to sync leads

Sign in to FlowChat:

<https://www.digitalbrandcast.com/FlowChat/sign-in>

Opening LeadSnapper

1. Click the **LeadSnapper** icon in the Chrome toolbar (top right).
2. The side panel opens with tabs along the top: **Find** → **Results** → **Pipeline** → **Export** → **Settings**.

Your daily workflow (4 steps)

Step	Tab	What you do
1	Find	Pick a preset or type a keyword (e.g. "restaurants London")
2	Results	Open Google or Maps, click Scan , review businesses
3	Pipeline	Add good leads, enrich phones/LinkedIn, set status
4	Export	Sync qualified (Hot + Warm) to FlowChat CRM

Step 1 — Find (search setup)

Quick presets

On the **Find** tab, tap a **Quick Preset** (e.g. restaurants, retail, professional services). Each preset sets:

- **Market** — UK or US
- **City / area**
- **Brand** — which company you are selling for (e.g. Mutex Systems or NexusCorp)
- **Services** you want to pitch

Custom search

1. Type your own **keyword** in the search box.
2. Set **city** and **country** if needed.
3. Click **Open in Google** or **Open in Maps** to start browsing results.

Tip: Google Maps and the Google "Places" tab usually give the best scan results.

Step 2 — Results (scan & score)

1. With Google or Maps open, click **Scan** (top of the panel or on the Results tab).
2. LeadSnapper lists businesses it found on that page.
3. Click a business to **expand** it and see details.

Lead priority (what the colours mean)

Priority	Meaning
Hot	Strong fit — prioritise these for outreach
Warm	Good prospect — worth following up
Cold	Weak fit or missing data — usually skip for CRM sync

The score updates as you enrich the lead (website data, company register, mobile lookup).

Useful actions on Results

- **Find owner mobile** — tries to get a direct mobile for the decision-maker (UK/US providers)
- **Add to Pipeline** — moves the lead into your working list
- **Select Hot** — quickly tick all Hot leads
- **Load more** — after scrolling Google, scan again for new businesses (existing ones are not duplicated)

If scan finds nothing: switch to **Google Maps** or the **Places** tab on Google Search, then scan again.

Step 3 — Pipeline (your working list)

The **Pipeline** tab is your session list for today.

For each lead you can:

- Edit **business name, phone, email, notes**
- Set **lead status** (e.g. New, Contacted, Qualified)
- See if it already synced to CRM (green **CRM** badge when done)
- **Delete** leads you no longer want

Enrich from website — if a lead has a website but thin details, use enrich to pull emails, social links, and tech signals from their site.

Step 4 — Export (Excel or FlowChat CRM)

Export to Excel

Use **Export to Excel** if you need a spreadsheet backup:

- Export all, selected, Hot only, Warm only, or by brand (Mutex / Nexus)

Sync to FlowChat CRM (main handoff to sales ops)

1. Go to **Export** tab.
2. Click **Sync qualified (Hot + Warm)** — this sends your best leads to FlowChat.
3. You will see a summary: how many were **created, updated, or skipped**.

4. In Pipeline, synced leads show a **CRM** badge.

You can also **Sync selected** or **Sync all** if your manager asks.

Important: Only **Hot** and **Warm** leads are sent when you use "Sync qualified". Cold leads stay in LeadSnapper only.

Settings (one-time setup)

Open the **Settings** tab. Your admin may do most of this; sales reps usually only check **Flow CRM sync**.

Brands

Pre-loaded brands (e.g. Mutex Systems, NexusCorp) include which **services** you sell. Pick the right brand on the **Find** tab before scanning.

Keywords & presets

Managers can add **keyword groups** and **presets** so the team searches consistently.

Local SMB mode (recommended for shops & restaurants)

When **ON** (default):

- **UK leads:** Companies House → Openmart → Cognism
- **US leads:** Openmart → Lusha

This is the normal mode for Google Maps / local business prospecting.

API keys (enrichment)

Your admin adds keys for:

- **Companies House** (UK, free) — company number and directors
- **Openmart, Cognism** (UK), **Lusha** (US) — mobiles and emails

Without keys, you can still scan and score, but **Find owner mobile** may not work.

Flow CRM sync (connect to FlowChat)

Field	What to enter
Enable Flow CRM sync	ON
FlowChat API base URL	https://www.digitalbrandcast.com/FlowChat/api
API key	From FlowChat → Settings → Integrations (starts with fc_live_...)

When configured, the green banner says "**Ready to sync from Export tab**".

Ask your admin for the API key — it is shown only once when created.

Connecting LeadSnapper ↔ FlowChat (quick checklist)

Admin does this in FlowChat (once):

1. **Settings** → **Integrations** → Create API key named "LeadSnapper"
2. **Settings** → **CRM** → Turn on **LeadSnapper** → **CRM sync**
3. Choose **Hot + Warm** as minimum priority
4. Click **Save & provision contact fields**

You do this in LeadSnapper:

1. **Settings** → paste API URL and key → turn on **Flow CRM sync**
2. **Export** → **Sync qualified (Hot + Warm)**

You confirm in FlowChat:

1. Open **Dashboard** → **Contacts**
2. New leads appear with business name, phones, LinkedIn, lead score, and priority

Tips for sales reps

- **Start with presets** — faster than typing keywords from scratch.
- **Scan Maps, not blogs** — LeadSnapper targets real businesses with a Google listing.
- **Enrich before you sync** — owner mobile and LinkedIn make follow-up easier.
- **Sync at end of session** — keeps FlowChat CRM up to date for the team.
- **Check FlowChat Contacts** — that is the single source of truth after sync.
- **Do not share your API key** — treat it like a password.

Common issues (plain English)

Problem	What to try
"Configure Flow CRM in Settings"	Add API URL + key; turn on sync in both LeadSnapper and FlowChat CRM settings
Sync says "skipped"	Lead may be Cold, duplicate, or below FlowChat's minimum priority
Scan finds 0 businesses	Use Google Maps or Places tab; refresh the page; scan again
Find owner mobile fails	Ask admin to add enrichment API keys in Settings
Lead already in pipeline	LeadSnapper detected a duplicate — update the existing one instead
CRM badge not showing	Sync again from Export; check internet; confirm API key is still valid

Where to go next

After syncing leads to FlowChat:

- **Call or email** from details on the **Contact** profile
- **Label** contacts (e.g. Hot Lead, Follow-up) in FlowChat
- **Start a chat** if they visit your website (FlowChat widget)
- **Email campaigns** — marketing team uses segments in FlowChat (see FlowChat User Guide)

For technical setup (installing the extension, DNS, deployments), see the internal IT guide. This document is for day-to-day sales use.
